Positions:

**Benefit:** Lift mechanism designed to ensure high lifting performance and comfort, facilitating the everyday life of the most needy user. Two actuators regulate the different movements in order to ensure infinite positions of use, from closed to TV to relaxing lifting (lift). The actuator that has the function of extending the footboard also plays a slight tilting

action of the seat and backrest; the second actuator instead reclines the backrest until it reaches the position of maximum extension. Both movements are independent of each other, to allow maximum freedom of use. In addition, the vertical-lift system raises the padding without rotation for the first 10 cm, allowing the person to adapt to intermediate heights before standing.
