**Benefit:** GLIDER manual is a versatile and extremely functional solid product. Designed in different configurations it can be used in armchairs and sofas (depending on the configurations and optional recommended). The standard model (STD) is equipped with a "Glider" tilting movement, which allows the padding to swing "forward and backward",

cradling the user. Depending on the type of finished product you want to make it is possible to integrate the STD mechanism with a series of accessories (base, swivel - only for armchairs -, block). The available sizes start from a minimum vacuum of 520mm up to a maximum of 880mm.
