**Benefit:** The KEYMOTION mechanisms are built entirely in Italy, from the raw material, to the processing, up to the final assembly and testing. The products are carefully checked before being shipped. This mechanism is designed to ensure high lifting performance and comfort, facilitating the everyday life of the most needy user. Two motors regulate the different positions: closed, TV, bed and lift. The first actuator, in addition to bringing the padded in position Lift,

extends the footboard by doing a slight tilting action to the seat and backrest; the second actuator instead reclines the backrest until you reach the Bed position. The vertical-lift system raises the padding without rotation for the first 10 cm, allowing the person to adapt to intermediate heights before standing. Finally, the Bed backrest increases the comfort in the open position with an inclination of as much as 22° more than the standard version. The mechanism is equipped with a base.
