Benefit: The KEYMOTION mechanisms are built entirely in Italy, from the raw material, to the processing, up to the final assembly and testing. The products are carefully checked before being shipped. This mechanism is designed to ensure high lifting performance and comfort, facilitating the everyday life of the most needy user. Two motors regulate the different positions: closed, TV, full relax and lift. The first actuator, in

addition to bringing the padded in position Lift, extends the footboard by doing a slight tilting action to the seat and backrest; the second actuator instead reclines the backrest until you reach the Full Relax position. The lift system lifts the padded (from closed position) allowing the person to stand upright. The mechanism is equipped with a base.
