Benefit: The KEYMOTION mechanisms are built entirely in Italy, from the raw material, to the processing, up to the final assembly and testing. The products are carefully checked before being shipped. The mechanics of this chair lift has been designed specifically to ensure maximum comfort. The reduced dimensions and the narrower seat, characteristics of the "MINUS" mechanism, make it suitable for smaller spaces.

Two motors regulate the different positions: closed, TV, fullrelax and lift. The first actuator, in addition to bringing the padded in position Lift, extends the footboard by doing a slight tilting action to the seat and backrest; the second actuator instead reclines the backrest until you reach the Full Relax position. The lift system lifts the padded (from closed position) allowing the person to stand upright. The mechanism is equipped with a base.
