Benefit: OPEN SPACE compact bi-power motorized is a highly innovative mechanism. It is the most "compact" (40 mm) version of the Open space family of mechanisms. The particular closure of the footboard, which remains about 17° compared to the ground, allows:

- to make a flap tablet longer (50mm) than standard mechanisms, increasing comfort in "full relaxation"
- to design a soft-line upholstery.

Thanks to the presence of the underpad, the padded mattress remains better in all phases of the movement; in addition to ensuring greater support in the calf area. The presence of two actuators makes the

movement of the mechanism smooth and sinuous, the motors are placed close to the jaws in order to have more space for padding and improve comfort with the ability to insert the COMFORTMAXX without increasing the thickness of the seat. The "Bridge" open base (high feet up to 180mm) support frame is modular and highly customizable. Thanks to its versatility, it makes the vacuum of the mechanics independent of the seat width. In this way you can create more spacious seats for sofas and armchairs with an extremely modern design. The product can be customized according to the needs of the customer and in the most different aspects, through a series of support kits sold separately at the request of the customer.

Optional

SOME ACCESSORIES  HEADREST & RATCHETS  COMFORTMAXX	ELECTRIC KIT  ACTUATORS	CONTROL SYSTEM  BUILT IN SWITCHES  CONTROL PLATES
 KD	 PLUGS & CABLE EXTENSIONS	 POWER SUPPLY & BATTERY PACKS
 FINISHES	 TOUCH SENSOR	 WIRED/ WIRELESS REMOTES  SMARTPHONE CONTROL SYSTEM
