Benefit: SCORPION open base manual is an innovative product that combines the characteristics of a mechanical to those of a backrest. Compared to the variants belonging to the same family, the open base model differs in the design and functionality of the foot levers that allow, through the presence of the flap, to insert a footboard that remains hidden when the mechanism is closed, and then appear during the opening with the aim of further increasing the space and

comfort dedicated to the footboard area, as well as offering an inspiration to further customize the final design of the padded. As with all SCORPION manual mechanics, to operate the mechanism just move the action of the user's weight back in order to trigger the synchronization mechanism that allows the simultaneous opening of the footboard and backrest, increasing the seat depth of 270mm. SCORPION open base manual is the product indicated in the creation of padded OPEN BASE (high feet).
