Benefit: The KEYMOTION mechanisms are entirely manufactured in Italy, from raw material, processing, assembly and final testing. The products are thoroughly checked before being shipped. The ROCKY250 lift M5 zero gravity is a mechanism designed to accompany in everyday life the person most in need, increasing the classic standard functions (closed, tv, relax). What distinguishes the ROCKY250 from the others in the industry is: the "Gravity 0" position. This position further amplifies the comfort you have in the "full relax" position. In addition, thanks to this additional inclination that aligns the legs to the

heart, blood circulation is also improved. The "Lunch" position allows you to sit comfortably but at the right height and tilt to cope with the time of meals in complete safety and tranquility. The "To bed" position allows the person to move from the armchair directly to the bed without getting up from the upholstered. Finally, the robotic kit with joystick that allows the user to move independently in the house without help. This line of products also has as optional various types of trolleys designed to meet the various needs of the customer. The motorized version, for example, lifts the chair by about 5 cm with the person sitting so you can move it comfortably.
